

UPGRADE TO VERSION 8.0.6.6

This upgrade:

- Fixes a non-serious Termly / Half Termly in advance booking bug.
- Allows you to choose your own invoice titles.
- Improves service template management.
- Improves the Staff Details forms and Staff Summary report and fixes an occasional problem saving staff details from the Staff Details form > Additional Details tab.
- Adds a new Undo Cancellation function to SuperFox.
- Allows more than one restricted PC users to run the program on a computer.

You can apply this upgrade to any version 8 SuperFox installation before version 8.0.6.6

Important

To use this upgrade you must already have installed a version of SuperFox 8 on your computer. As usual this upgrade must be installed from a PC account with Administrator privileges.

How To Apply The Upgrade

You will either have a copy of the upgrade on CD or you will need to download the upgrade from the SuperFox website at:

<http://www.superfox.org.uk>

Before you do anything else make sure that:

- **You have already installed SuperFox 8 at version 8.0.6.5 or earlier on your computer.**
- **You are using a PC account with Administrator privileges.**
- **SuperFox is NOT running.**

If you are upgrading from a CD simply place the CD your computer and the upgrade will start automatically.

If you are upgrading by downloading a file remember that you do not have to download the file from the machine that you use for SuperFox.

- A) Place the file somewhere convenient on your computer and double click on it.
- B) Windows will display the contents of the download.
- C) Right click and use 'Extract All...' to extract the update from the file. Browse to the extracted file.
- D) Double click on the SuperFoxV8066Update file and choose the 'Run' option.
- E) Windows will issue an Unknown Publisher message. Choose Run again.

Whichever method you are using the installation will now start and the process is described below.

1. The upgrade will start by reminding you that it is intended for use with version 8 software, only. (It will not upgrade version 7.99 or earlier installations.)

Choose **Yes** to continue.

2. The upgrade will give you the option of repairing or removing SuperFox.

Choose **'Repair SuperFox'**

...and then press the Finish button to continue.

3. **THERE WILL NOW BE QUITE A LONG PAUSE WHILE THE UPGRADE UNPACKS ITSELF.**

This can be a long pause lasting a minute or more, especially if you are upgrading from CD.

Be patient, the 'Installing SuperFox' screen will eventually appear.

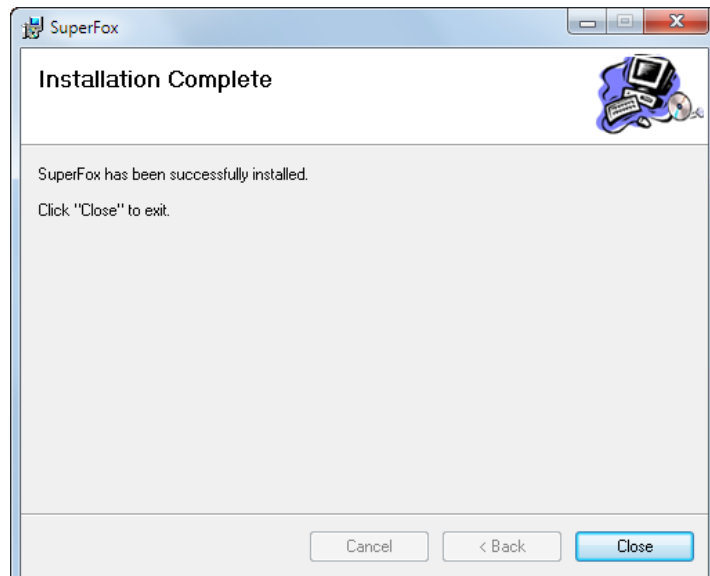

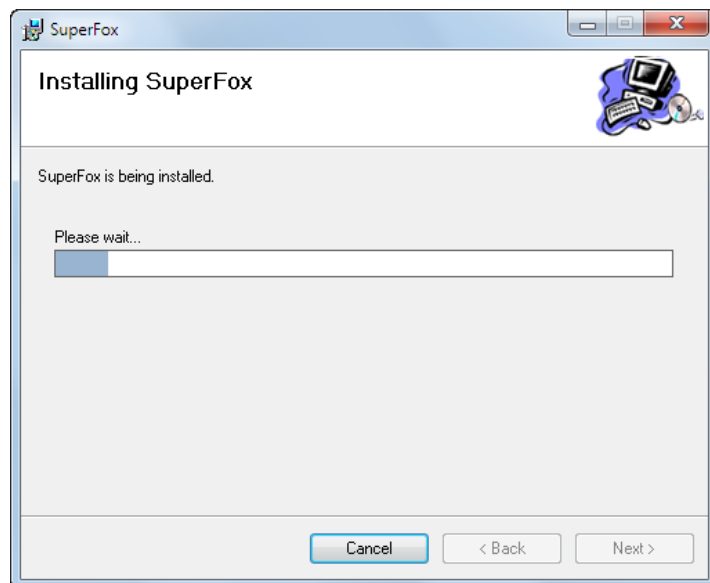

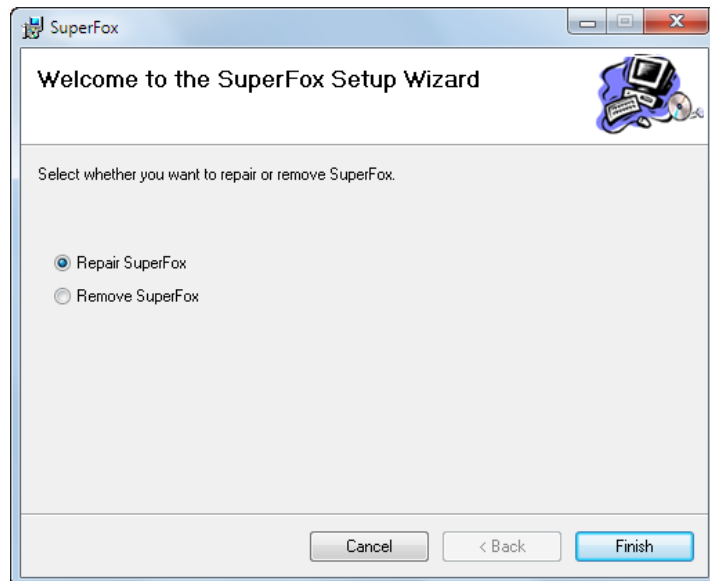

4. The upgrade will then run the install wizard, which looks similar to the initial installer that you used when you first installed SuperFox.

5. When the installation is complete press the Close button on the wizard.

6. The upgrade is now complete.

7. To check that the upgrade has been installed start SuperFox and from the top menu choose Help > About SuperFox >

The upgrade will have changed the program version to 8.0.6.6

The Upgrade Makes The Following Changes

You will see the following changes:

- Extends the activation time.

Thanks for taking the time to apply the upgrade and we hope you enjoy using the new version of the software.

With Best Wishes,

From everyone in the SuperFox team.

End
